

DOT STRENGTH TEST

Which dot strength does your printer handle? Write a few words in each field, then draw one straight line from top to bottom through all three.

In the app: every field whose writing comes through works on your printer.

A NORMAL 100 % ink

Same dots as the sheets that came with the trick.

Files: no strength in the name, and the originals.

Works on my printer?

☐ yes ☐ no

write here

B LIGHT 50 % ink

Half-size dots. Less toner, less visible.

Files ending in '- light'.

Works on my printer?

☐ yes ☐ no

write here

C EXTRA LIGHT 33 % ink - experimental

A third of the ink. Needs a good printer.

Files ending in '- extra light'.

Works on my printer?

☐ yes ☐ no

write here

Use the lightest strength that reads reliably. If in doubt, go one step heavier.

Print at 100% / Actual Size, 'Black ink only' or grayscale, on US Letter or A4.

Same code as sheet 9 of the A4 sets (original, Blank A4, Lined, Grid, Letter) - don't mix them.
